Committee: Leon Ammons Danny Cummings Joe Hymes Tim Kidwell Mary Phillips		

Contest Scope

The Nursery/Landscape Contest includes all aspects of the industry in producing, marketing, utilizing, and maintaining landscape plants (woody and herbaceous plants and turfgrasses), plus related products, equipment, and services including landscape design.

Contest Objectives

PLANT MATERIALS - to demonstrate the ability to identify nursery and landscape plant materials and turfgrasses commonly used in the United States.

PLANT DISORDERS - to demonstrate the ability to identify unhealthy plant conditions due to pests, nutritional or physiological disorders, and mechanical or chemical injury.

CULTURAL PRACTICES - to demonstrate knowledge of the principles and skills involved in propagation, growth requirements, growing techniques, harvesting, marketing and maintenance of nursery plants and landscape turf.

DESIGN AND CONSTRUCTION - to demonstrate knowledge of the principles and techniques of landscape design and construction.

SUPPLIES AND EQUIPMENT - to demonstrate the ability to identify, select, use and maintain appropriate supplies and equipment for nursery and landscape operations, including equipment and procedures in mechanization and automation.

SAFETY - to demonstrate knowledge of safety practices in nursery and landscape operations.

INTERPERSONAL RELATIONS - to demonstrate skills in oral and written business communications.

MARKETING - to understand marketing principles and demonstrate proper sales and service skills.

2017 Career Development Event Rules and Regulations

RECORDS AND REPORTS - to demonstrate the ability to prepare accurate and legible records and reports and to interpret business documents.

Rules of the Contest

1. Teams and/or schools or coaches will not visit the WVU greenhouses after September 1.
2. Observers will not be permitted in the contests area while the contest is in progress, unless they are assisting with the contest.
3. Contestants will be assigned to group leaders who will escort them to the various contest staging sites. Each contestant is to stay with his or her group leader throughout the contests or until told to change leaders by the Contest Superintendent.
4. Under no circumstances will any contestant be allowed to touch or handle plant material or other specimens during the contest except as specified in certain practicums. Any infraction of this rule will be sufficient cause to eliminate the team from the contest.
5. In addition to a clean clipboard and at least two No. 2 pencils, each contestant must also have a ruler or scale capable of measuring 1/8-inch increments, a calculator, and a ball-point or felt-tip pen.
6. Calculators may only be used in the practicum portions of the contest. Printing calculators are not allowed.
7. The contest includes the following four phases:
 - identification of plant materials.
 - identification of plant disorders
 - general knowledge examination, and
 - practicum

These are described as follows.

Phase 1 - IDENTIFICATION OF PLANT MATERIALS, EQUIPMENT AND SUPPLIES (150 points). Please refer to page 213 of the National CDE Bulletin.

Participants will identify 50 items selected from the provided list covering the following categories:

- Plant Materials (25 items)
- Pests and Disorders (10 items)
- Equipment and Supplies (15 items)

Plants to identify will be presented as intact, live specimens. Equipment may be either an intact item or photograph. Pest and disorder items may be presented as an intact specimen, photograph, or preserved specimen (herbarium sheet, insect mount, etc.). When a problem must be presented with an affected plant, a "Disorder" label will be with the item to designate identification of the problem rather than the plant. Each specimen will be designated by a station number (1-50). When the participant identifies the item, its name is then located on the identification list. The participant then records the number by that name on Scanning Sheet 105482 at the respective station number.

2017 Career Development Event Rules and Regulations

Each participant will be provided a copy of the list at the event site. Three points will be awarded for each correct identification, and participants have 50 minutes to complete this event phase. No specimens or items may be touched or handled in any way.

Phase 2 - GENERAL KNOWLEDGE EXAMINATION (150 points)

Fifty (50) question objective multiple-choice exam will be prepared on topics reflecting subject areas in the contest objectives. This contest phase will evaluate the contestant's knowledge and understanding of basic horticultural principles in producing, marketing, using, and maintaining nursery plants and turf. Contestants are allowed 50 minutes to complete this phase. Each correct answer is worth three (3) points.

Starting in 2011, test questions will come from the past five years of the National Nursery Landscape CDE Tests. Each year an additional national test will be added to the question pool until ten years of questions have been reached. Once ten years of questions have been added to the pool, each year the latest test will be added and the oldest test removed from the question pool.

Phase 3 - LANDSCAPE ESTIMATING (100 points)

This practicum section is designed to evaluate contestant knowledge of and ability in 1) evaluating a landscape design, 2) reading a landscape drawing, 3) measuring and calculating materials needed to execute a landscape plan, and 4) evaluating factors that affect profitability of a landscape business.

A landscape drawing and scratch paper will be provided to the contestants. There will be objective questions about the landscape plan. Participants will record their answers using a scan form. Thirty (30) minutes will be allowed for this practicum. Each correct answer is worth 5 points each. Past national contests will be used to provide examples for the event.

Landscape estimating drawings and questions will come from the past years of the National Nursery Landscape CDE Tests. Each year an additional national drawing/question set will be added to the question pool until ten years of drawings/questions have been reached. Once ten years of drawings/questions have been added to the pool, each year the latest test will be added and the oldest test removed from the question pool.

Phase 4 - ASSESSMENT AND SOLUTIONS (50 points)

This practicum is designed to evaluate participant knowledge of and ability in 1) assessing the request or problem presented, 2) reviewing alternative procedures or courses of action based on individual knowledge or reference information provided, and 3) deciding on a solution. Possible solutions will be presented in multiple-choice form for the participant to mark on Scanning Sheet 105482.

2017 Career Development Event Rules and Regulations

Ten situations will be presented from the following four areas:

Measuring Nursery Stock - One nursery plant will be measured for market size (height, spread, or caliper as appropriate) according to the American Standard for Nursery Stock for BR and B&B evergreen and deciduous trees and shrubs. A caliper and measuring rule will be provided. Plants presented in containers will be assumed as growing in the field, and a label will advise on whether it is to be dug BR or B&B. Cut trunk sections may be presented for larger tree measurement.

Pruning Nursery Stock - One or more nursery plants will be displayed with points marked for possible pruning cuts. No plant will be actually pruned. Participants are to evaluate each labeled point and decide if the plant part should be pruned or not for improvement of the plant's health, form, and overall quality. The answer choice then will be the combination of cuts that should be made.

Equipment Maintenance – Tools from the list in Phase 3, a part for a tool, and/or an operating manual will be presented with answer choices of possible maintenance needs, corrective actions, and/or operating specifications. Examples of possible choices are low oil, uneven height setting, blade needs sharpening, incorrect gas:oil ratio provided, or replace broken handle.

Equipment will be placed to allow observing all components in the answer choices without handling the item. If handling should be required, allowance for this will be stated with that answer choice.

Problem Solving - Other situations of nursery and landscape plants, supplies, or practices where observation and analysis of the subject and resource materials are involved in a decision- making process. Example situations may include the following:

- According to the sample label provided, a spill of this chemical must be handled by _____ ?
- From the information provided on these catalog pages, one bag of the designated medium will fill _____ pots of the size and shape presented.
- According to the information provided, which plants in this list would likely need a protected site for winter survival in the Indianapolis, Indiana area?

Participants have 10 minutes to complete this phase. Each correct solution has a value of five points.

Scoring the Contest

Individual contestant scores will be the sum of the scores from the four phases of the contest, based on the following possible point values:

Phase	Points
General Knowledge Exam	150
Identification	150

2017 Career Development Event Rules and Regulations

Landscape Estimating	100
Assessment and Solution	<u>50</u>
	400

If needed in the case of tied individual or team total scores, final placings will be determined by comparing, in order, scores for the following:

1. Identification of Plant Materials
2. Exam
3. Landscape Drawing
